department テーブルを作成します。

create table department(departmentID int,departmentName varchar(255), primary key (depatmentID));

insert into departmnet values(1,'開発部');

insert into department values(2,'営業部');

insert into department values(3,'総務部');

station テーブルを作成します。

create table station(statonID int,stationName varchar(255), primary key(stationID));

insert into station values(1,'九段下');

insert into staiton values(2,'永田町');

insert into station values(3,'渋谷')

insert into station values(4,'神保町');

insert into station values(5,'上井草');

userテーブルを作成します。

create table user(userID int,name varchar(255),tell varchar(255),age int, birthday date, departmentID int, stationID int, primary key(userID), foreign key(departmentID) references department(departmentID), foreign key(stationID) references station(stationID)); insert into user values(1,'田中実','012-345-6789',30,'1994-02-01',3,1); …以下鈴木さんから高橋さんまで同様にinsertしていきます。

```
tell
                                                   departmentID | stationID
 userID
                                       birthday
         name
                                 age
